## Beef

## Poultry

# Food Production is Very Complex

- Some industries are export dependant
- Some are focused on domestic markets
- Imports are not trivial
- Supply chains are very complex

Passive Animal Disease Surveillance in Canada  
A Benchmark, Proceedings of a CAHNet Workshop held December 6, 1998  
Ottawa, Ontario Prepared by: Christine Power, DVM, MSc

# Alberta Cattle Movements 2007

- 644,962 shipments per year
- 7,424,196 cattle shipped per year
- 1,767 shipments per day
- 20,314 cattle shipped per day

July: 5,452 premises, 29,678 shipments, 374,455 cattle

# Drivers

- **Reduce burden of disease in people**
  - Produce safe food
- **Security of the food supply**
  - Food borne pathogens disrupt supply of safe food
- **Economic viability of the industry**
  - Access to markets
  - Pathogen risk reduction to meet trading partners standard
  - Consumer confidence

# Drivers

- **Reduce burden of disease in people**
  - Produce safe food
- **Security of supply**
  - Food borne illness
- **Economic**
  - Access to markets
  - Pathogen risk reduction to meet trading partners standard
  - Consumer confidence

**Source Attribution is Critical**

**Decision making**

**Prioritizing resources**

# Surveillance

- **Measure the burden of disease and how it changes**
  - Focus pathogen reduction activities
  - Valid attribute identification
  - Document the risk or health (trade)
  - Complete supply chain and human illness
- **Early pathogen introduction ID**
  - Mitigate the harm
    - Human illness
    - Loss to industry (markets animals)

# AVSN: Alberta Veterinary Surveillance Network

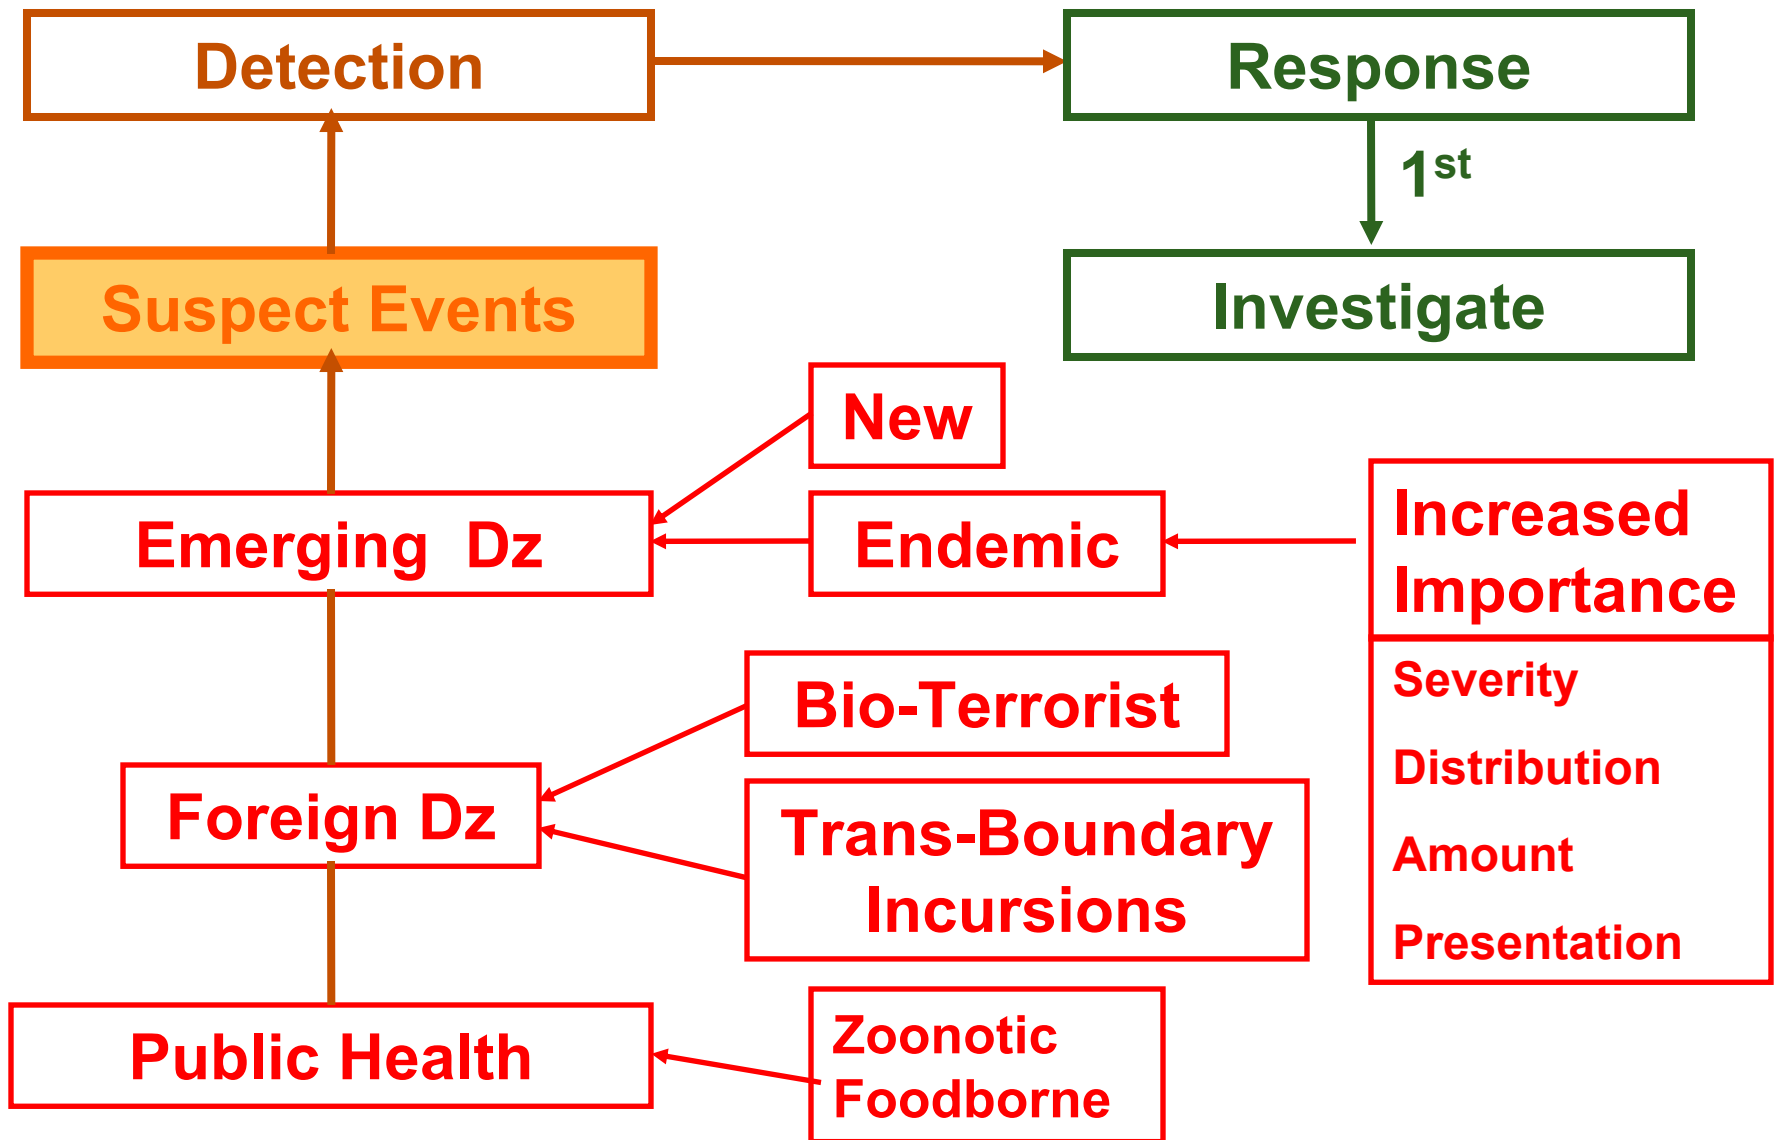

## Infrastructure\* for:

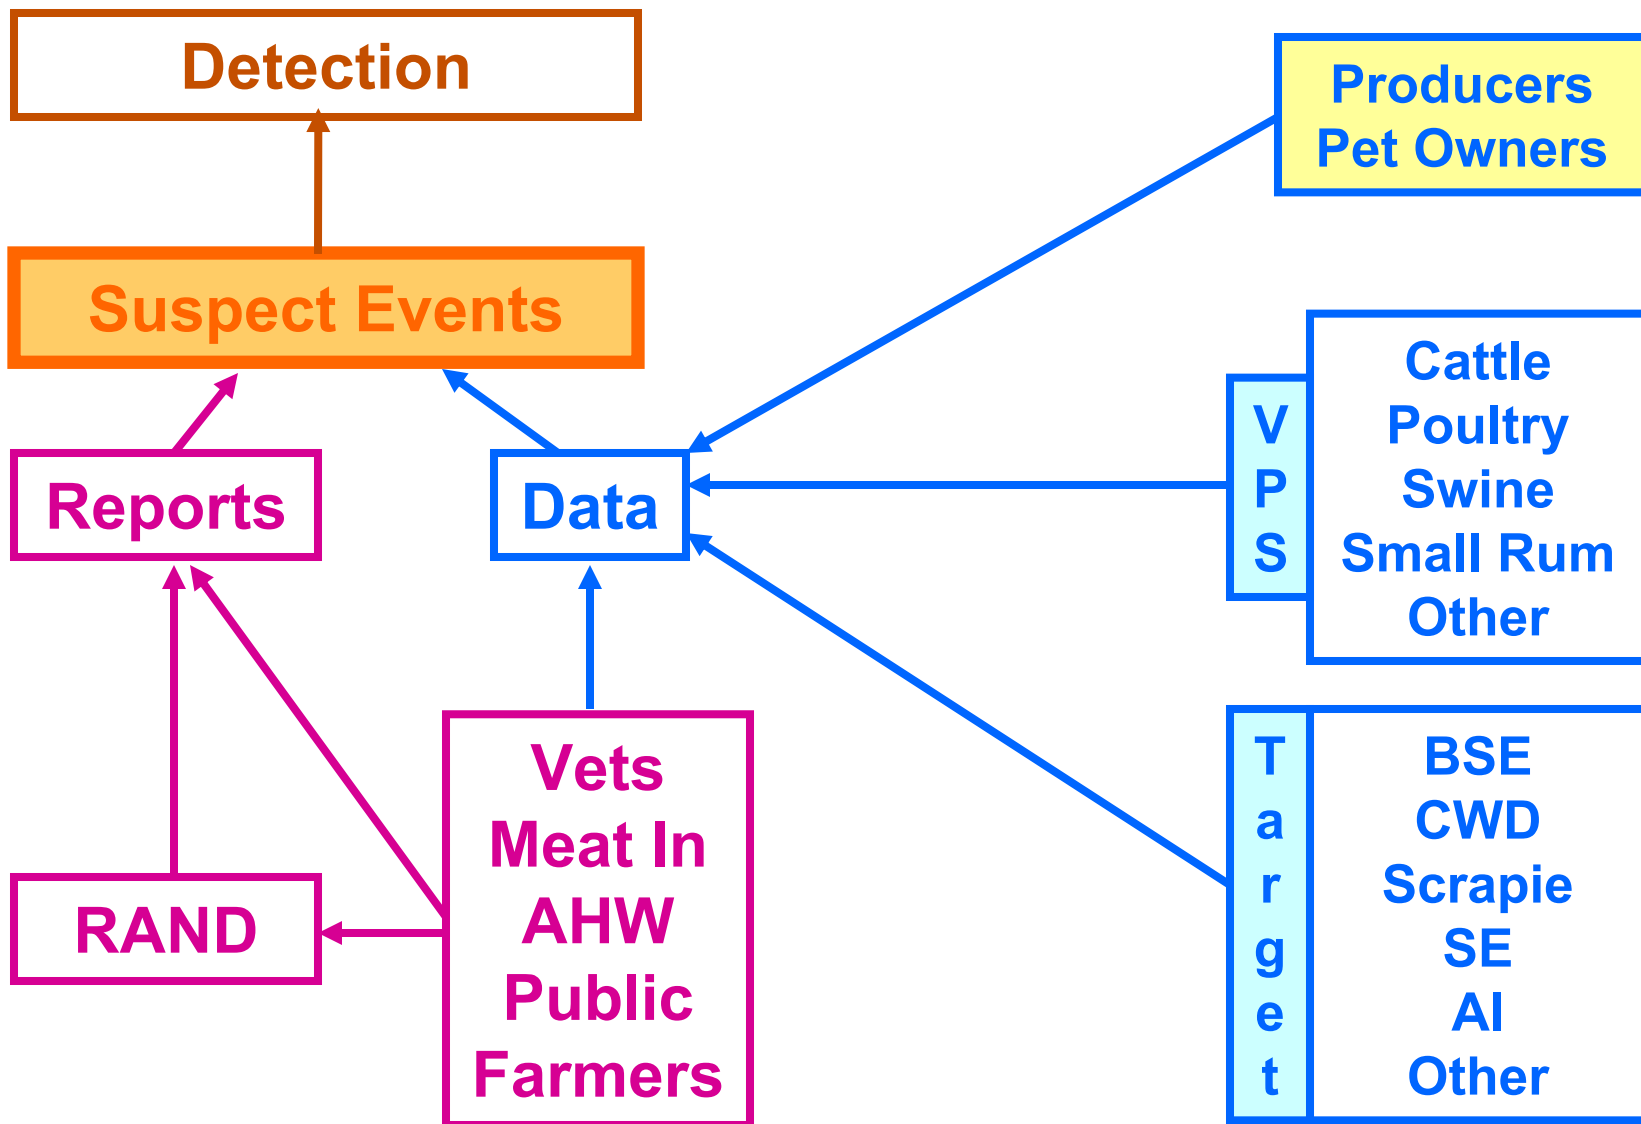

- Systematic continuous observation of AB livestock and poultry, and collection and analysis of data from many varied sources for:
- Rapid detection (or identification) and timely, appropriate response to important livestock, poultry, food safety and public health events

## And

- Production and communication of valid information and knowledge about the health and disease status of AB livestock and poultry and safety of their products

**\*People, Processes and Technology**

# Federal

- **The Public Health Agency of Canada** conducts outbreak surveillance and epidemiology and provides advice to protect people's health.
- **Health Canada** develops food safety standards and policies to help minimize the risk of foodborne illnesses.
- **The Canadian Food Inspection Agency** carries out inspection of the food industry to ensure that it meets its food safety responsibilities.
- <http://www.phac-aspc.gc.ca/fs-sa/index-eng.php>

# Provincial

- **Animal Health**

- Provincial scope varies across Canada
- Provincially: by Ag Ministries
- Federal: by the CFIA

- **Food safety/meat inspection**

- Provincial scope varies across Canada
- Provincial plants: Ag and Health ministries and CFIA
- Federal plants: CFIA

- **Public Health**

- Provincial scope varies cross Canada

# FPT Initiatives

- **National Animal Health and Welfare Strategy**
- **National Strategy for Safe Food**
  - **Agri-Subcommittee on Food Safety**
  - **Pathogen Reduction in Meat and Poultry Working Group**
- **Canadian Animal Health Surveillance Network**
- **Canadian Network for Public Health Intelligence**
- **Alberta livestock and meat strategy**

# Challenges:

- **Knowledge creation and communication**
  - Rapid outbreak identification
  - Burden of disease: priority setting
  - Disease attribution
  - Supply chain/distribution system
- **Policy development**
  - Evidence based
  - Communicate complex ideas to decision makers
  - Participatory: all stakeholders
  - Jurisdiction

# Challenges:

- **Response**
  - Participatory: all stakeholders
  - Regulatory/governance
- **Recovery**
  - Participatory: all stakeholders
  - Compensation
- **Cross domain collaboration at all levels**
- **Governance**
  - Who decides who will make the decisions

**Thank You**
