

# Cooperation at the Interface of Human and Animal Health

**Stephan Monroe, PhD**

Director, Division of High-Consequence Pathogens and Pathology  
National Center for Emerging and Zoonotic Infectious Diseases  
Centers for Disease Control and Prevention

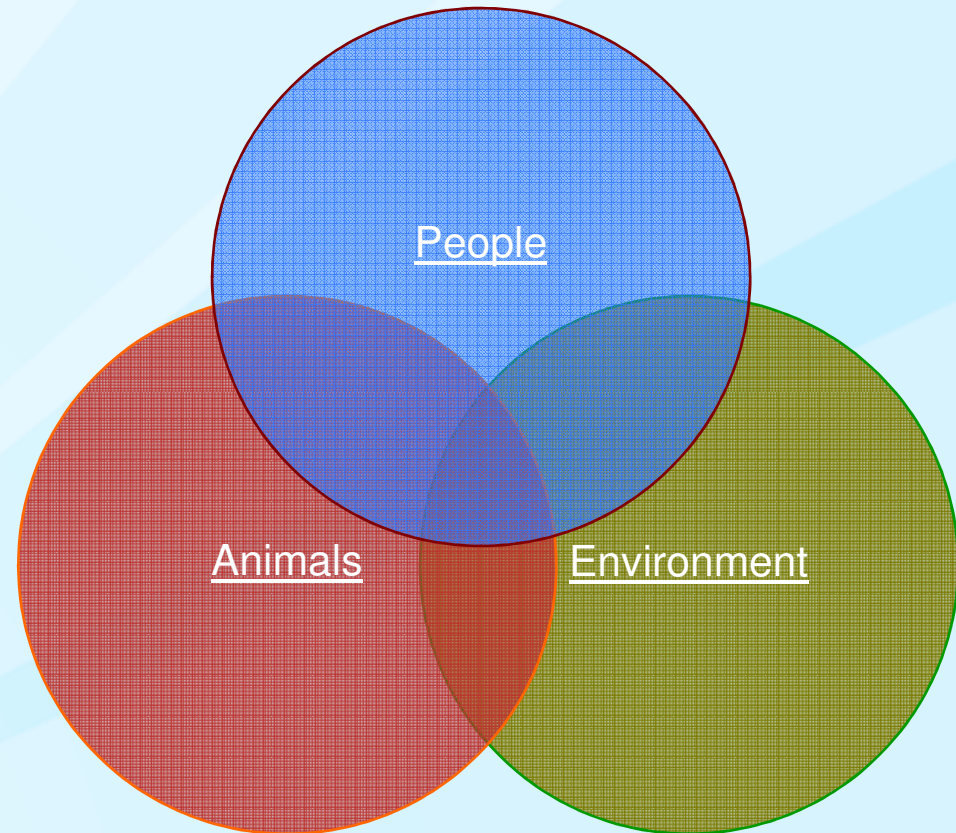

Farm Foundation Zoonoses Symposium  
23 September 2010

National Center for Emerging and Zoonotic Infectious Diseases  
Division of High-Consequence Pathogens and Pathology

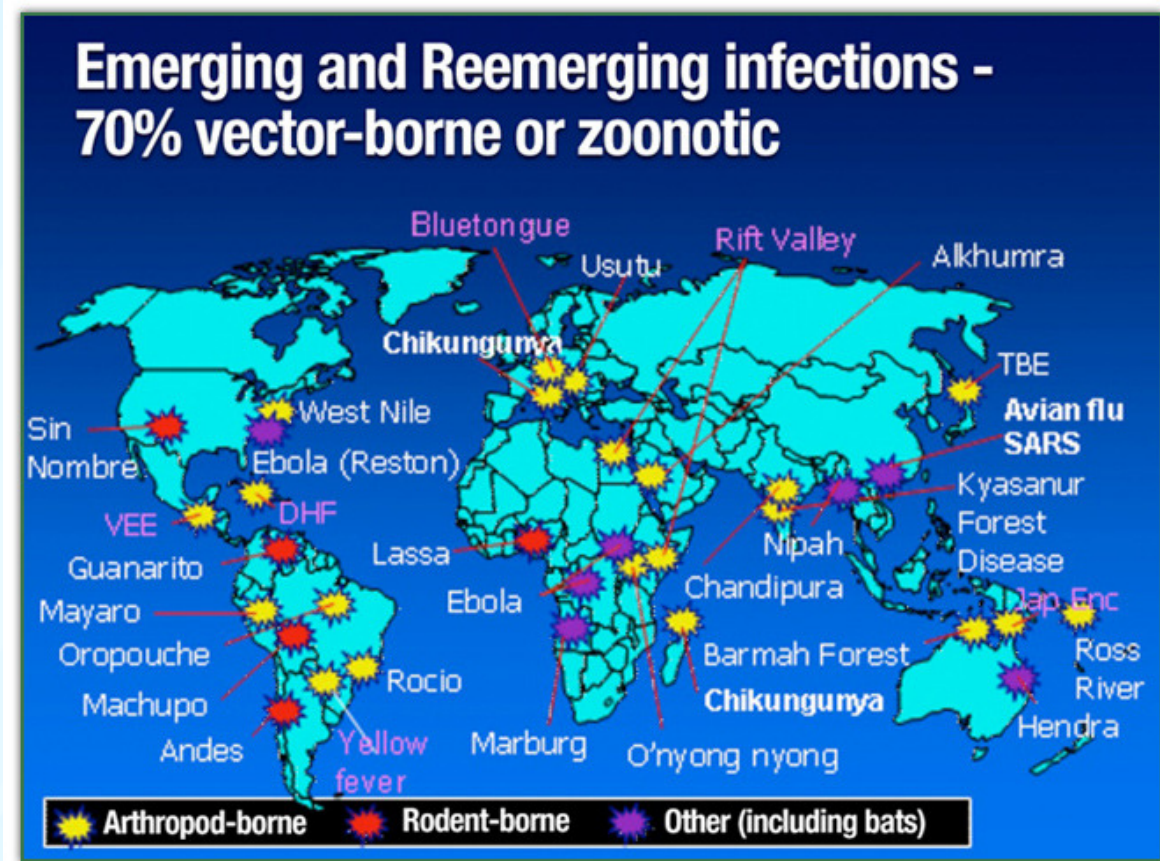

# What is “One Health?”

One Health seeks to promote, improve, and defend the health and well-being of all species by enhancing cooperation and collaboration between physicians, veterinarians, and other scientific health professionals and by promoting strengths in leadership and management to achieve these goals.

# Human Infections are Increasingly Zoonotic or Vector-borne

# Factors in Emergence of Infectious Diseases

- Microbial adaptation and change
- Host susceptibility to infection
- Climate and weather
- Changing ecosystems
- Economic development and land use
- Human demographics and behavior
- Technology and industry

## Factors in Emergence of Infectious Diseases (2)

- International travel and commerce
- Breakdown of public health measures
- Poverty and social inequality
- War and famine
- Lack of political will
- Intent to harm

## The One Health Concept Is Not New

Rudolf Virchow (1821-1902)

*"... between animal and human medicine there are no dividing lines— nor should there be."*

- German MD
- "Father" of pathology
- Coined term zoonosis
- Initiated the concept of meat inspection to prevent human illness

## **“Two Health” During the 20th Century**

- ❑ **Human and veterinary medicine increasingly specialized**
- ❑ **Separation between human and veterinary medicine (and human animal diseases)**
- ❑ **Zoonotic disease not emphasized in medical schools**
- ❑ **Veterinary training focus shifted from livestock medicine and comparative medicine research to companion animal medicine**

## **Rebirth of One Health in the 21<sup>st</sup> Century**

- ❑ **One World - One Health Symposium; New York, 2004**
  - Wildlife Conversation Society / Rockefeller University
  - 12 Manhattan Principles
- ❑ **One World – One Health: From ideas to Action; Winnipeg, 2009**
  - Public Health Agency of Canada
- ❑ **Operationalizing One Health; Atlanta, 2010**
  - 7 Workgroups: Training, Capacity Building, One Health Global Network, Proof of Concept, Information Clearing House, Business Plan, Needs Assessment

[http://www.oneworldonehealth.org/sept2004/owoh\\_sept04.html](http://www.oneworldonehealth.org/sept2004/owoh_sept04.html)

## **An Example of “Two Health” Paradigm Clash: Q fever in the Netherlands**

- ❑ **Infrequent bacterial zoonoses (*Coxiella burnetti*)**
- ❑ **Causes minor disease in animals (mostly sheep and goats) although can result in abortions and stillbirths**
- ❑ **Aborted goat placentas can distribute billions of microbes into the environment**
- ❑ **Human illness usually manifests as pneumonia**
- ❑ **Category ‘B’ bioterrorism agent**

## Q Fever in the Netherlands: Human Cases

## **“Two Health” Two Very Different Perspectives**

- ❑ Human Health**
- ❑ Vets didn't report soon enough**
- ❑ Economic interests trumped human health**
- ❑ Problem is increased high-intensity goat farming**
- ❑ Massive culling is necessary**
- ❑ Animal Health**
- ❑ Most animals healthy**
- ❑ Increase in cases due to better Dx tests and surveillance**
- ❑ Problem due to strain variation**
- ❑ Massive culling is unnecessary**

## Mass Culling of Pregnant Goats

SCIENCE 15 January 2010

## **Current Outcomes**

- ❑ **All pregnant goats are being destroyed**
- ❑ **Potentially devastating impact on farmers**
- ❑ **2011 vaccination campaign**
- ❑ **C. burnetii persists in the environment**
- ❑ **Role of cattle farms still undefined**

## **How Could This Response Have Been Different if Approached from a One Health Perspective?**

- ❑ Enhanced surveillance among animals for diseases that can impact human health**
- ❑ Effective vaccination strategies**
- ❑ Integrated surveillance communication channels that notify human PH of increased animals cases**
- ❑ Improved laboratory diagnostics to identify new disease strain that may pose a human risk**
- ❑ Recognize animal disease in a timeframe that prevents human disease**

# One Health in Action: Rift Valley Fever

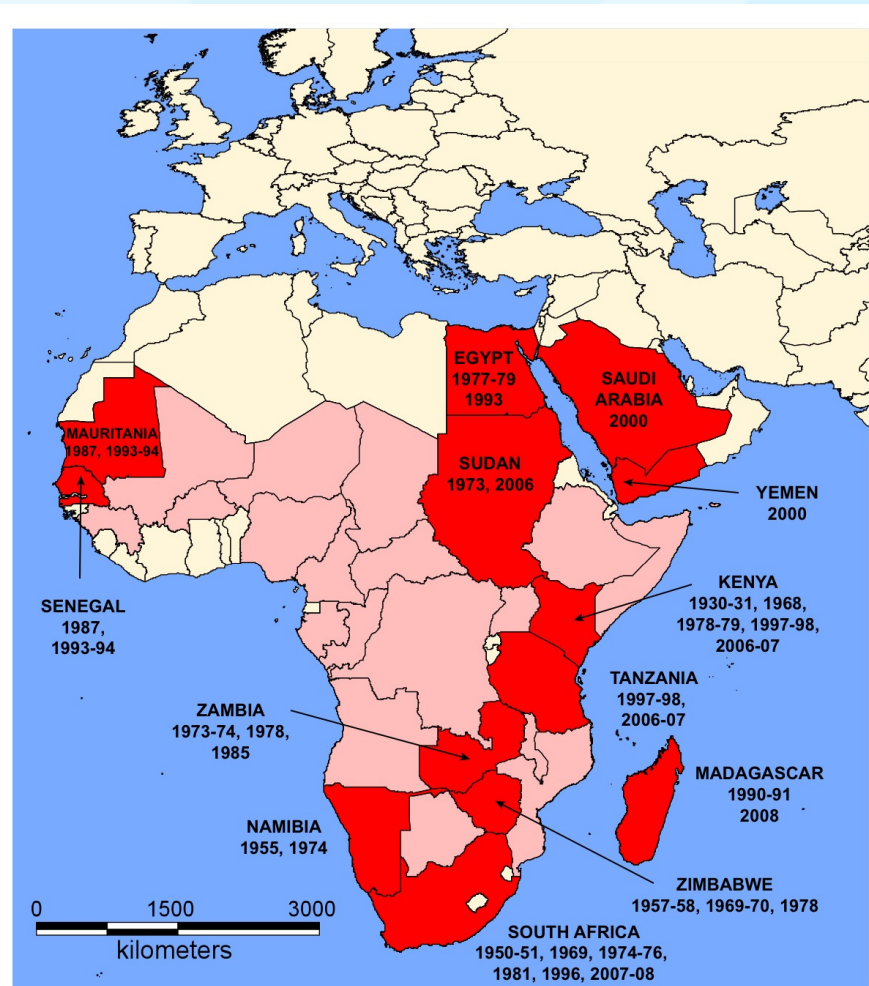

- ❑ **Impact:**
  - ❑ **Massive Human and Veterinary morbidity/mortality**
- ❑ **Risk groups:**
  - ❑ **Farmers, veterinarians, animal health workers, general public**
- ❑ **Incentive for Intervention:**
  - ❑ **Massive economic damages during epizootics**

Rift Valley fever: lethal in many animal species

## Geographic Distribution of Rift Valley Fever

- First Case Reports:
  - 1910 – 1920
- Virus first isolated:
  - Kenya, 1931
- Widespread outbreak in South Africa, 2010

# Rift Valley Fever – Enzootic Cycle

Heavy rainfall - Flooding

Emergence of floodwater mosquitoes, including transovarially infected *Aedes* sp.

Epidemic in human population

Infection of secondary vectors

Aerosol/  
percutaneous  
exposure

High viremia  
develops in  
susceptible  
animals

Infected mosquitoes  
feed on livestock

## **RVF: Human Health Impact**

<b>Location</b>	<b>Infections</b>	<b>Fatalities</b>
Egypt 1977-78	~200,000	600
Saudi Arabia, Yemen 2000	1,973	245
Kenya 2006-07	660	153
South Africa 2010	164	15

## RVF: Animal Health Impact

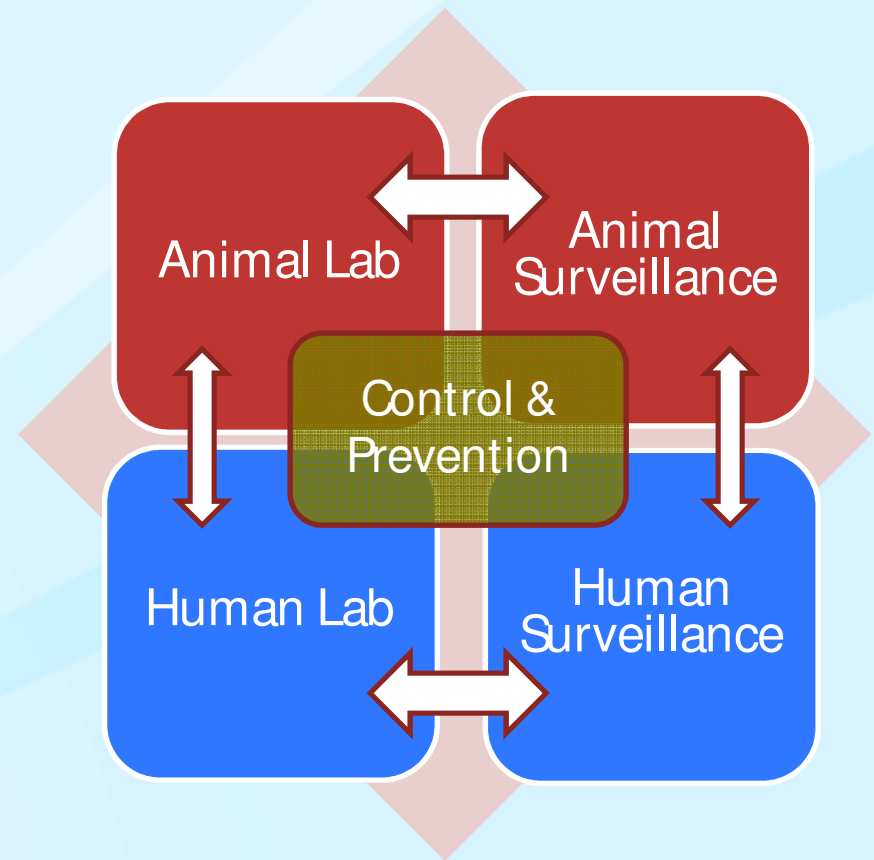

Location	Consequences
Egypt 1977-78	\$115M (USD)
Saudi Arabia, Yemen 2000	??\$ Collapse of trade from E. Africa
Kenya 2006-07	??\$ Loss of ~10% of herd
South Africa 2010	??\$ Widespread outbreak

# Rational Design of RVF Live-attenuated Vaccine

# Implementing One Health Nationally: A Coordination Challenge

Implementing an effective One Health approach to disease control and prevention requires multi-dimensional coordination at the regional/global level

# Implementing One Health Globally: A Multi-dimensional Challenge

Implementing an effective One Health approach to disease control and prevention requires multi-dimensional coordination at the regional/global level
